SafeDNS provides web filtering and information security solutions that filter the internet at the DNS layer with AI-powered technology, such as automatic categorization of domains and malicious resources detection. The core SafeDNS service is in the cloud, and connecting to it requires no hardware and software.

The SafeDNS solutions provide customers – from educational institutions to libraries to businesses – with a highly effective tool to defend themselves against malware, manage web access, monitor, and control online activity. Now the SafeDNS products and cloud services are used by over 5 000 schools and libraries – protecting tens of thousands of students, pupils, and library-goers worldwide.

What You Need SafeDNS For

Choose what you need to filter out from your network – porn and adult-only sites, social media, online gaming portals, Etc.

Internet access management and content filtering

Get internet access at educational institutions and libraries under your full control. Allow students and employees to access only appropriate and relevant sites, complying with educational values. Create flexible filtering policies per age group preventing users from surfing to unwanted resources. With SafeDNS, you will avoid reputational damage to what kids and staff do on the internet.

Enhanced protection against porn and child sexual abuse content

Filter out porn and child sexual abuse content on your network. SafeDNS has two filtering categories, entirely dedicated to child sexual abuse material – block them to make sure students and staff never access this most heinous stuff. The well tested SafeDNS service blocks near-perfect 98.5% of requests to adult content, according to the 2020 test results by AV-Comparatives, a world-known test lab.

Protection against malicious and phishing resources

To safeguard users, secure your entire network from emerging and long-existing cyber threats – botnets, phishing, and malicious sites. Let no malware from infected user devices to infiltrate your networks and harm inexperienced internet users.

Since 2015 SafeDNS has annually been tested and certified as an Approved Parental Control Product by AV-Comparatives. For all the five years of tests, SafeDNS has returned zero false-positives.

We are a Friendly Wi-Fi Approved Partner. SafeDNS closely cooperates with Friendly Wi-Fi, a popular self-certification scheme for public Wi-Fi providers.

SafeDNS is a Member of Internet Watch Foundation/IWF, a leading organization for reporting and removing online child sexual abuse content.

SafeDNS support Project Arachnid, run by the Canadian Centre for Child Protection/ C3P. As part of the project, C3P compiles a list of resources with child sexual abuse content – for blocking by project blocking supporters.

SafeDNS can filter out sites considered unsafe by the Federal Department for media harmful to young persons (BPjM), Germany.

Deployment and management

The SafeDNS cloud service for web content filtering can be deployed on a network or individual devices in minutes. The service is managed 24/7 from anywhere on the internet via a centralized online dashboard.

It allows you to deploy a separate filtering policy for every age group you have. You can fine-tune the policies and change them for specific age groups at any minute.

Benefits You Get

Save money and time

No need for you to invest in hardware and software to deploy SafeDNS. Implementation takes just a few minutes.

Comply with regulation and district policy

We provide US schools with the solution, which is CIPA compliant. With us, educators in Canada, Germany, the UK, and other countries can comply with local regulations.

Get online safety for staff and students of any age

With unwanted content filtered out, there's a little possibility your network users will come across gross, explicit, age-inappropriate sites.

Monitor your internet traffic

Check out internet usage stats regularly to know what your network users do on the internet. This might offer you useful information for taking measures before any damage is done.
What Is Behind SafeDNS Solutions

109M internet resources

in our categorization database

61 content categories

topic-based ones and those related to cybersecurity

Machine learning & big data

are applied to categorize internet resources and detect malicious ones automatically

13 data centers

situated all over the world – in Africa, both Americas, Australia, Europe, and the Far East

Additional SafeDNS Features

- Forced YouTube Restricted Mode
- Endpoint protection
- Forced SafeSearch Mode for Google and Bing
- Intelligent white- or blacklisting – per filtering policy

Customers Trust Us

Among schools, colleges, universities and libraries using SafeDNS, there are relatively large ones
