

SafeDNS provides web filtering and information security solutions based on internet filtering at the DNS layer with its AI-powered technology to categorize domains and detect malicious resources automatically. The core service of SafeDNS is in the cloud, and connecting to it requires no hardware and software.

The SafeDNS solutions provide customers – from religious and educational institutions to libraries to businesses – with a highly useful tool to defend themselves against malware, manage web access, monitor and control online activity.

Now the SafeDNS products and cloud services are used by a huge number of churches/parishes/dioceses, 5 000 schools, and libraries, which protect tens of thousands of believers, students, pupils, and library-goers worldwide.

What You Need SafeDNS For

Choose what you need to filter out from your network—porn and adult-only sites, social media, online casino, and gaming portals, etc.

Internet access management and content filtering

Get internet access at your religious institution and its community center under your full control. Allow church attendees and employees to access only appropriate and relevant sites, complying with their values.

Create flexible filtering policies per age group preventing users from accessing unwanted resources. With SafeDNS, you will avoid reputational damage to what the congregation and staff do on the internet.

Enhanced protection against porn and child sexual abuse content

Filter out porn, adult, and child sexual abuse content on your network. SafeDNS has two filtering categories, entirely dedicated to child sexual abuse material – block them to make sure the congregation and staff never access this most heinous stuff.

The effective SafeDNS service blocks near-perfect 98.5% of requests to adult content, according to the 2020 test results by AV-Comparatives, a world-known test lab.

Protection against malicious and phishing resources

To safeguard users, secure your entire network from emerging and existing cyber threats – botnets, phishing, and malicious sites. Let no malware from infected user devices infiltrate your networks and harm unaware internet users.

Since 2015 SafeDNS has annually been tested and certified as an Approved Parental Control Product by AV-Comparatives. For all the five years of tests, SafeDNS has returned zero false positives.

We are a Friendly Wi-Fi Approved Partner. SafeDNS closely cooperates with Friendly Wi-Fi, a popular self-certification scheme for public Wi-Fi providers.

SafeDNS is a Member of Internet Watch Foundation/IWF, a leading organization for reporting and removing online child sexual abuse content.

SafeDNS supports Project Arachnid, run by the Canadian Centre for Child Protection/ C3P. As part of the project, C3P compiles a list of resources with child sexual abuse content – for blocking by project supporters.

SafeDNS can filter out sites considered unsafe by the Federal Department for media harmful to young persons (BPjM), Germany.

Deployment and management

The SafeDNS cloud service for web content filtering can be deployed on a network or individual devices in minutes. The service is managed 24/7 from anywhere on the internet via a centralized online dashboard. It allows you to deploy a separate filtering policy for every age group you have. You can fine-tune the policies and change them for specific age groups at any minute.

SAFEDNS

| SafeDNS For Religious Institutions

Benefits You Get

Save money and time

No further investment is required for hardware and software to deploy SafeDNS. Implementation takes just a few minutes.

Comply with regulation and district policy

A vivid testimony to the fact that SafeDNS is precisely what religious institutions need to safeguard their congregations. We provide US schools with the solution, which is CIPA compliant. With us, educators in Canada, the UK, Germany, and beyond can comply with local regulations.

Get online safety for staff and parishioners of any age

With unwanted content filtered out, there's a little possibility your network users will come across gross, explicit, age-inappropriate sites.

Monitor your internet traffic

Check out internet usage stats regularly to know what your network users do on the internet. Those insights might offer you useful information for taking measures before any damage occurs.

What Is Behind SafeDNS Solutions

109

109M internet resources

in our categorization database

61

61 content categories

topic-based ones and those related to cybersecurity

Machine learning & big data

are applied to categorize internet resources and detect malicious ones automatically

13

13 data centers

situated all over the world – in Africa, the Americas, Australia, Europe, and the Far East

Additional SafeDNS Features

Forced YouTube Restricted Mode

Endpoint protection

Forced SafeSearch Mode for Google and Bing

Intelligent white- or blacklisting – per filtering policy

Customers Trust Us

Among churches and parishes using SafeDNS, there are relatively large ones.
