# ((🗼)) SAFEDNS

# Threat intelligence designed for all OEM needs

Our AI-driven Threat Intelligence System tailored for OEM partners integrates seamlessly into enterprise security solutions, ISP infrastructures, routers, and regulatory compliance systems, ensuring robust protection against cyber threats and solid content filtering while optimizing network performance.

## Ideal for:

### 🖥️ Customer Premises Equipment

SafeDNS enhances CPE devices by providing built-in DNS Security and content filtering, ensuring network protection at the gateway level without additional software. ISPs and CPE manufacturers can offer seamless security and compliance-ready solutions.

### ✦ VPN & Cloud Solutions

SafeDNS secures VPN and cloud environments by blocking threats at the DNS level while encrypting traffic (DoH/DoT) to prevent spoofing and interception. It integrates seamlessly, ensuring privacy, zero-trust security, and high-performance protection without added latency.

### 🛡️ Cybersecurity Vendors

SafeDNS integrates with security platforms, adding AI-powered domain categorization and DNS-layer threat protection to prevent phishing, malware, DNS Tunnelling and DNS Spoofing and more attacks, strengthening overall network security.

## Solutions for OEM

### ● SafeDNS Cloud

A scalable, cloud-based DNS security solution for OEMs, enabling seamless integration with routers, security platforms, and network services. Provides real-time threat blocking, encrypted DNS (DoH/DoT), and customizable filtering policies for ISPs, MSPs, and enterprises.

### ● Categorization

An AI-powered domain classification engine processing billions of requests daily. Enables precise filtering for cybersecurity vendors, ISPs, and regulatory solutions, offering real-time updates and deep threat intelligence to enhance security and compliance.

## What You Can Offer to Your Customers with SafeDNS

### ⛊ ProtectiveDNS

Our solution goes beyond traditional security, proactively blocking malicious activity across seven critical threat categories. Acting as a full-scale DNS Firewall, it ensures comprehensive protection against DNS Spoofing, Interception, and Man-in-the-Middle attacks while supporting DoH, DoT, and DNSSEC for secure, encrypted DNS resolution.

### ▽ Your Content, Your Rules

SafeDNS empowers OEM manufacturers with an AI-driven content filtering solution that seamlessly integrates into their products. With 66 filtering categories covering security, compliance, productivity, and bandwidth management, OEMs can offer precise content control tailored to their customers' needs.

### ⇄ Your Brand in Control

SafeDNS empowers OEMs with a fully white-labeled DNS security and content filtering solution. Customize the UI, domain, and policies for a seamless brand experience while delivering enterprise-grade protection. Enhance your product offering with trusted technology—your brand, your control.

### ▤ Compliance Made Simple

SafeDNS takes the hassle out of compliance, integrating industry standards into your security offering. Our Friendly Wi-Fi certified solution helps OEMs meet KCSIE, CIPA, SOC, ISO, and IWF requirements, ensuring networks are safe, compliant, and ready for public use, no extra effort required.

---

### Reveal Security Gaps

Identify vulnerabilities with real-time insights and analytics.
### React without Delay

Block threats instantly with real-time AI-driven protection.

### Resist Network Threats

Repel all threats to your network with SafeDNS.

---

**Use case**

## Dovado sought to add value to its networking hardware by improving cyber security for its users

Dovado said about the release of the SafeDNS enhanced router, "We've introduced a really nice and simple parental control solution we know parents are going to love! Simply insert your SafeDNS login credentials into the router and surf in peace".

## 🎁 Partnership Program

Unlock the full potential of cybersecurity with the SafeDNS OEM Partnership Program. We offer flexible and beneficial pricing models tailored to your business needs, ensuring scalability and cost efficiency. The SafeDNS OEM Partnership Program is available in three tiers: Registered, Silver, and Gold, each offering increasing discounts, additional support, and exclusive benefits. Higher-tier partners receive enhanced customization options, priority technical assistance, and advanced analytics access, maximizing their competitive edge in the market.
