SafeDNS provides web filtering and information security solutions based on filtering the internet at the DNS layer with the company's own technology for automatic categorization of domains, detection of malicious resources and content filtering. The core SafeDNS service is in the cloud and its implementation requires no hardware and software.

The SafeDNS solutions provide corporate customers – from SMB to enterprise – with a highly effective tool to defend themselves against malware, manage web access, monitor and control online activity. Now the SafeDNS products and cloud services are used by more than 4 000 organizations, 100 telecom operators, 300 partners, and tens of thousands of home users worldwide.

What You Need SafeDNS For

Internet access management and content filtering

Get internet access in your organization under your full control. Allow your staff to access only relevant internet resources needed to do their job. In case corporate rules on web surfing are breached you'll be able to take swift and efficient measures

Protect against malicious and phishing resources

Secure your entire networks, however large they are, from emerging and long-existing cyber threats. With filtering service stats you'll be able to see DNS queries to dangerous resources. You'll be alerted when SafeDNS identifies requests from protected devices to botnet C&Cs

Safeguard your guest Wi-Fi networks

Ensure your wireless network users are well protected against inappropriate and irrelevant content online. Make sure malware from the internet and infected user devices does not infiltrate your network

Deployment And Management

The SafeDNS cloud service for web content filtering can be deployed on a network in a matter of minutes. The service is managed 24/7 from anywhere on the internet via a centralized online dashboard. It allows you to deploy an individual filtering policy for every single user. You can fine tune the policies and change them for specific users at any minute.

Endpoint Protection

Use our agent program, SafeDNS Agent, for PCs to apply different filtering policies on the same computer for different users – on and off corporate network. Manage Agent remotely on any number of machines.

Benefits You Get

Save money
No need for you to invest into hardware and software

Internet usage policy compliance
With SafeDNS this task gets much easier – for organization's leaders, IT and HR pros

Productivity driver
With non-work related resources filtered out, your staff has nothing to do, except for their job

Traffic monitoring
Check out detailed service stats to be in the know how employees use the internet during work time

What Is Behind SafeDNS Solutions

105

105M internet resources

in our own categorization database

58
