

Web Filtering for Wi-Fi Providers

Centralized security
for all your endpoints and networks

SAFEDNS

Would you like to offer your customers an efficient protection from online threats?
Do you need a solution requiring no extra hardware and software to install for you or your customers?

Solution for Wi-Fi Providers

What is the most efficient tool for filtering your customers' web traffic and control their end users internet activity? We know that the best one is easy to apply and manage, that will not force you to spend money on expensive hardware to run it and won't overblock your end users.

SafeDNS Hotspot Edition Is Exactly What You're Looking for

Our cloud-based web filtering solution for Wi-Fi providers is an excellent way to manage web access from your customers' networks, comply with internet policies and protect end users from botnets, phishing and malware sites.

Operating system and platform independent, SafeDNS Hotspot Edition covers all web-connected devices, that end users may bring to surf internet from public Wi-Fi.

Whether you have ten or ten thousand locations, SafeDNS Hotspot Edition is designed with your company in mind, enabling you to provide faster and safer internet to every customer and end user.

Why SafeDNS?

SafeDNS is one of the top developers of cloud-based web filtering solutions. We process over 1 billion queries from users of our service every day.

Three out of four (72 per cent) America's coffee shops, cafes and restaurants have no restrictions on access to pornography.

Our filtering servers are located throughout data centers in Africa, Australia, both Americas, Europe, and the Far East. That's why there is no latency in DNS filtering and our users' internet surfing.

Since **2010** our service is deployed by over **100** ISPs and **300** partners in the EMEA and US, more than **4000** schools and libraries and tens of thousands of home users.

We protect Wi-Fi networks in malls, national parks, buses, hospitals and many other places.

The daily updated database of categorized websites covers billions of web pages and contains over **105** million websites in **60** categories.

Starting from **2015**, the efficiency of the SafeDNS web filtering service has been proved multiple times by AV Comparatives, a world leading test lab. For **4** years straight our web filtering system is named Approved Parental Control Product.

According to the latest test results, SafeDNS blocks over **98.3%** of requests to adult content, over **75%** of other harmful content. For all the years of testing SafeDNS has had no false positives.

SafeDNS is **Editor's Choice for Content Management & Filtering Solutions in 2016 Cyber Defense Magazine Infosec Awards**. This recognition by the industry's leading electronic information security magazine emphasizes the fact that all users enjoy advanced technology for protection from web threats and making the internet cleaner and safer. The award further validates our company as an innovator in the sphere of online security and web content filtering.

SafeDNS is **Internet Watch Foundation (IWF) Member**. IWF is a leading organization for reporting and removing online child sexual abuse images and videos. Together we're making the internet a safer place. Read more or report a website here: www.iwf.org.uk. Do the right thing.

Being IWF Member, SafeDNS includes in its web filtering systems and blocks URLs of indecent images of children and abuse domains from Child Abuse Images and content list (CAIC) compiled by IWF.

SafeDNS supports Project Arachnid, run by Canadian Centre for Child Protection (C3P). As part of this project, C3P compiles a list of internet resources with child sexual abuse material. Being a Project Arachnid supporter SafeDNS added to its database a dedicated content category, Child Sexual Abuse (Arachnid), for blocking by filtering service users.

CANADIAN CENTRE for CHILD PROTECTION®
Helping families. Protecting children.

SafeDNS is also **Friendly WiFi Partner**. With SafeDNS, public Wi-Fi owners and providers can get Friendly WiFi certification with a nice discount.

It also means our content filtering solutions are recommended for public Wi-Fi owners and providers seeking to ensure safe web connection for their users.

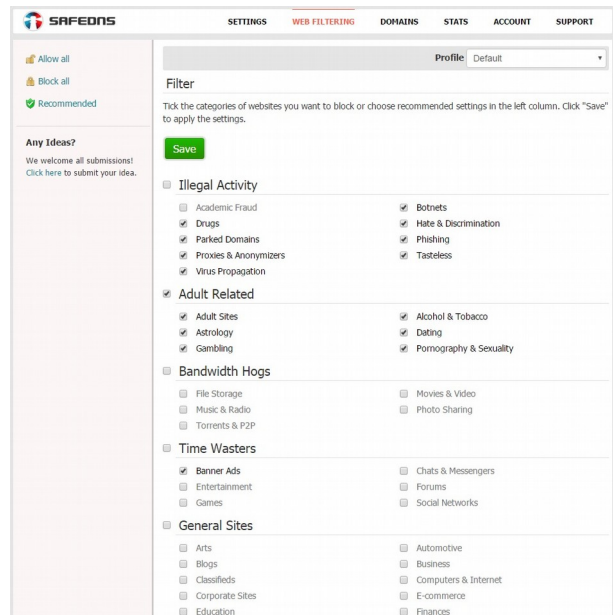

Service Features

Safer Internet Experience

To fine tune the filter and to create the ideal protection policy for your customers you may choose from 60 web filtering categories, covering 105 million domains.

Moreover, we enable you to fully customize the filtering to meet specific needs with white and black lists.

You can also create exceptions to always allow or block specific domains or give access to internal non-public domains.

“In our opinion, the DNS security screening service is one of the most effective, easy to configure and affordable on the market! SafeDNS service is an essential addition to any security firewall configuration and public hotspot”. Yannick Goupil, Autobus Maheux

Additional Revenue Flow from Your Customers

Get more from your customers by providing them secure and fast content filtering as part of your services.

Centralized Management & Reporting

Centralize policy configuration for all your customers networks, locations and devices through web-based management dashboard. Get detailed reports via web or email.

No New Hardware. No Software

Eliminate network latency, bottlenecks and points of failure associated with slow DNS resolving, traditional appliances and on-premise solutions. Deploy protection to all your customers Wi-Fi hotspots in no time without ever leaving your office.

Increase Brand Loyalty

Brand the block page with your logo and custom message or make your own design of the block page.

Dynamic DNS Services Support

You can work with our filtering system regardless which IP addresses are given to your Wi-Fi hotspots. SafeDNS supports flexible setting of both static and dynamic Ips.

SafeDNS Licensing

There are two ways of licensing to choose from. One is a pay-as-you-grow model based on the number of connected Wi-Fi routers. The other one is based on the number of connected locations, the number of Wi-Fi end points notwithstanding.

Benefits You Get

- **Provide additional protection** from online threats for your customers Wi-Fi hotspots. The filtering system prevents possible attacks from the internet as well as from infected end users' devices.
- **Increase customers' loyalty and show social responsibility** of your brand. People will appreciate that you care about their safety.
- **Promote your brand** with fully customizable block page.
- **Get more satisfied customers.** Families with children are more likely to visit places with safe WiFi connection.

- **Provide faster and safer web surfing**, free of ads, your clients and their guest users are going to like.
- **Increase ROI and ARPU of your services**, create new marketing and revenue opportunities with our content filtering solutions.
